

## Further Generic Drug Reductions

Effective April 1, 2017, the following six popular generic drugs, already priced at 18% of the brand name drugs, have been further reduced to 15% of the equivalent brand drug price.

- Atorvastatin (Lipitor) – cholesterol disorders
- Amlodipine (Norvasc) – high blood pressure/angina
- Simvastatin (Zocor) – cholesterol disorders
- Pantoprazole (Pantoloc) – gastrointestinal disorders
- Clopidogrel (Plavix) – heart attack and stroke prevention
- Ramipril (Altace) – high blood pressure

Since only drug plans with mandatory generic pricing will fully capitalize on these price decreases, these additional reductions further emphasize the importance of the implementation of mandatory generic drugs. If your drug plan does not include mandatory generics, please contact your Account Executive to discuss this amendment to your plan.
